

## **Step-and-Flash Imprint Lithography for Storage-Class Memory**

*M. Hart, IBM Almaden Research Center*

In this talk, two key aspects of realizing a solid-state, ultra-high-density, nonvolatile, low-cost memory technology will be discussed. In particular, a multi-organization effort to incorporate step-and-flash imprint lithography into a conventional 200mm CMOS process to address these two aspects will be described.
